EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael G. Verga on 9/19/2011.

The application has been amended as follows:

- Claims 25, 34, 55 have been amended respectively to:

"25. (Currently Amended) A method of managing the supply of power to an output circuit of an implantable hearing prosthesis comprising a voltage converter circuit and a plurality of rechargeable batteries, the method comprising the steps of:

converting, with the voltage converter circuit, a supply voltage to a battery voltage;

selectively connecting, using a switch matrix, a desired one of the batteries to the voltage converter circuit;

charging the desired one of the batteries based on information on each of the batteries stored in a register;

selectively connecting, based on the information on each of the batteries stored in the register and using the switch matrix, a selected one of the batteries to the voltage

converter circuit to enable the selected one of the batteries to be discharged through the output circuit; and

converting, with the voltage converter circuit, the voltage output from the selected one of the batteries to a voltage for use by the output circuit.”

“34. (Currently Amended) An implantable hearing prosthesis, comprising:

an output circuit; and

a power management system configured to supply power to the output circuit comprising:

a plurality of rechargeable batteries;

a voltage converter circuit configured to convert a supply voltage to a battery voltage;

a multiplexer having inputs each connected to a terminal of each of the batteries;

a shunt resistor connected to a second terminal of each of the batteries, wherein the shunt resistor is connected in parallel to a shunt switch to short circuit the resistor when the resistor is not in use;

a control unit configured to control a switch matrix to selectively connect a desired one of the batteries to the voltage converter circuit for charging of the desired one of the batteries and to selectively connect a selected one of the batteries to the output circuit to enable the selected one of the batteries to be discharged through the output circuit,

wherein the voltage converter circuit further connects the output circuit to the switch matrix and is configured to convert the voltage of the selected one of the batteries to a voltage for use by the output circuit."

"55. (Currently Amended) A system comprising:

a power supply having a first induction coil; and

an implantable hearing prosthesis comprising:

a second induction coil configured to detect a varying magnetic field from the first induction coil when the first and second induction coils are in close proximity;

an output circuit; and

a power management system configured to receive a supply voltage from the second induction coil and provide power to the output circuit, comprising:

a plurality of rechargeable batteries;

a multiplexer having an input connected to one terminal of each of the batteries;

a shunt resistor connected to a second terminal of each of the batteries, wherein the shunt resistor is connected in parallel to a shunt switch to short circuit the resistor when the resistor is not in use.

a voltage converter circuit configured to convert the supply voltage to a battery voltage; and

a switch matrix configured to selectively connect a desired one of the batteries to the voltage converter circuit for charging of the desired one of the

batteries and for selectively connecting a selected one of the batteries to the output circuit to enable the selected one of the batteries to be discharged through the output circuit,

wherein the voltage converter circuit further connects the output circuit to the switch matrix and is configured to convert the voltage of the selected one of the batteries to a voltage for use by the output circuit."

REASONS FOR ALLOWANCE

2. Claims 25, 27, 29-34, 39, 44-51, 53-57, 61-65 are allowed.
3. The following is an examiner's statement of reasons for the indication of allowable subject matters:

For claim 25, None of the prior art alone or in combination discloses a method of managing the supply of power to an output circuit of an implantable hearing prosthesis having a voltage converter circuit and a plurality of rechargeable batteries having the steps of: ... selectively connecting, using a switch matrix, a desired one of the batteries to the voltage converter circuit; charging the desired one of the batteries based on information on each of the batteries stored in a register; selectively connecting, based on the information on each of the batteries stored in the register and using the switch matrix, a selected one of the batteries to the voltage converter circuit to enable the selected one of the batteries to be discharged through the output circuit.

For claim 34, None of the prior art alone or in combination discloses an implantable hearing prosthesis having ... a multiplexer having inputs each connected to

a terminal of each of the batteries; a shunt resistor connected to a second terminal of each of the batteries, wherein the shunt resistor is connected in parallel to a shunt switch to short circuit the resistor when the resistor is not in use; a control unit configured to control a switch matrix to selectively connect a desired one of the batteries to the voltage converter circuit for charging of the desired one of the batteries and to selectively connect a selected one of the batteries to the output circuit to enable the selected one of the batteries to be discharged through the output circuit,

For claim 55, None of the prior art alone or in combination discloses a system having ... a multiplexer having an input connected to one terminal of each of the batteries; a shunt resistor connected to a second terminal of each of the batteries, wherein the shunt resistor is connected in parallel to a shunt switch to short circuit the resistor when the resistor is not in use. ... a switch matrix configured to selectively connect a desired one of the batteries to the voltage converter circuit for charging of the desired one of the batteries and for selectively connecting a selected one of the batteries to the output circuit to enable the selected one of the batteries to be discharged through the output circuit.

The aforementioned limitations in combination with all remaining limitations of the respective claims are believed to render the aforementioned indicated claim and any dependent claims thereof patentable over the art of record.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
